DIGITAL EVOLUTION DASHBOARD UKRAINE

DIGITAL EVOLUTION INDEX IS A COLLABORATIVE RESEARCH INITIATIVE
OF THE FLETCHER SCHOOL AT TUFTS UNIVERSITY AND MASTERCARD.

UPDATED Q2 2025

The Digital Evolution Index is an interactive research platform built to provide evidence-driven, actionable insights on how to enhance digital competitiveness, nurture trust in the digital economy, and foster responsible use of data, AI, and other advanced technologies for enhanced productivity and the greater good.

The following Digital Evolution Dashboard provides an in-depth breakdown of a single economy's relative performance. The Dashboards offer a suite of powerful visualizations to gauge an economy's digital strengths and shortcomings, benchmarking an economy's score in each index dimension against global and income group peer medians. The Dashboards compare the digital maturity and historical growth trajectory of 125 select economies—comprising 96.5% of the globe's online population—across four key drivers: Supply Conditions, Demand Conditions, Institutional Environment, and Innovation and Change.

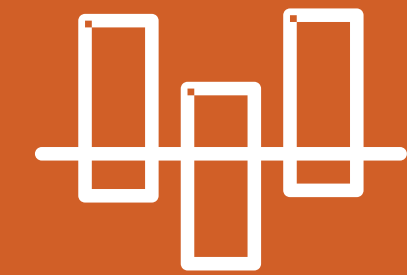

The resulting framework captures both the state and rate of digital evolution and identifies implications for investment, innovation, and policy priorities. Box and whisker plots for each metric demonstrate where in the distribution an economy falls, with a triangle representing the average metric score for their respective World Bank income group.

Economies are also assessed on their relative trend in the given metric from 2008 to 2023—from rapidly receding to rapidly advancing—an assessment we represent with arrows. This edition offers data, insights, policy recommendations, and international comparisons to guide decision-makers in charting a path out of the pandemic-induced economic challenges of the early 2020s and toward a data-enabled, artificial intelligence-augmented, and inclusive digital future.
